Objects

Hello

A *slide* with a title and an **important** information.

1. Hello world
2. Goodbye!

```
class Person:
    def __init__(self, name: str, age: int):
        self.name = name
        self.age = age
```

A *slide* with a title and an **important** information.

1. Hello world
2. Goodbye!

```
class Person:
    def __init__(self, name: str, age: int):
        self.name = name
        self.age = age
```

Federated Averaging

$$\omega^{t+1} = \sum_{k=1}^K \frac{n_k}{n} \omega_k^{t+1}$$

Hello, this is a function: $f(x)$.

1. Hello
2. Goodbye!

- Computing platforms running outside of IT-managed corporate (or national lab) environments and data centers are not new.
- Today's edge systems are *extensions* of general IT-managed components as though they were within the control and security of an industrial-grade data center.
- Edge systems are essentially remote computing systems and borrow elements from established engineering domains of embedded systems, cloud computing, computer security, and telecommunications.

Let's briefly survey some related terms.
